

PHYSICS AND SPECTRUM OF INTERSTELLAR MATTER

Gary FERLAND

(University of Kentucky, USA)

Thursday, July 15, 2021, 13:30-15:15 (CEST)

The spectrum is how we understand what is happening in the interstellar medium, and the telescope is how we measure the spectrum. I will talk about how the spectrum is formed and how we can use simulations to understand what the spectrum tells us about what is happening in front of our telescopes.
